EXP NO: 03 DATE:

DEVELOP A LEXICAL ANALYSER TO RECOGNIZE A FEW PATTERNS IN C. (EX.IDENTIFIERS, CONSTANTS, COMMENTS, AND OPERATORS, ETC.) USING LEX TOOL.

AIM:

To develop a Lexical Analyzer using the LEX tool that recognizes different tokens in a given C program snippet, including Identifier, Constants, Comments, Operators, Keywords, Special Symbols.

ALGORITHM:

- Start
- Define token patterns in **LEX** for:
 - **Keywords** (e.g., int, float, if, else)
 - **Identifiers** (variable/function names)
 - **Constants** (integer and floating-point numbers)
 - Operators (+, -, =, ==, !=, *, /)
 - Comments (// single-line, /* multi-line */)
 - **Special Symbols** ({, }, (,), ;, ,)
- Read input source code.
- Match the code tokens using LEX rules.
- Print each recognized token with its type.
 - End

PROGRAM:

```
% {
    #include <stdio.h>
    #include <stdib.h>
    #include <string.h>
    #include <stddef.h>
% }

% %

"int"|"float"|"if"|"else" { printf("KEYWORD: %s\n", yytext); }

[a-zA-Z_][a-zA-Z0-9_]* { printf("IDENTIFIER: %s\n", yytext); }

[0-9]+ { printf("INTEGER CONSTANT: %s\n", yytext); }
```

LOKESHWAR S (220701146)

LOKESHWAR S (220701146)

OUTPUT:

```
lex lexer.l cc lex.yy.c -o lexer ./a.out Sample Input int main() { int a = 10; float b = 20.5; /* This is a multi-line comment */ if (a > b) { a = a + b; } return 0; }
```

```
Keyword: int
Identifier: main
Special Symbol: (
Special Symbol: )
Special Symbol: {
Keyword: int
Identifier: a
Operator: =
Constant: 10
Special Symbol: ;
Keyword: float
Identifier: b
Operator: =
Constant: 20.5
Special Symbol: ;
Multi-line Comment: /* This is a multi-line comment */
Keyword: if
Special Symbol: (
Identifier: a
Operator: >
Identifier: b
Special Symbol: )
Special Symbol: {
Identifier: a
```
